

# PRACTICAL No.1

**AIM: Create an Android application to demonstrate the Android Activity Lifecycle.**

**CODE:**

**activity\_main.xml:**

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
xmlns:android="http://schemas.android.com/apk/res/android"
xmlns:app="http://schemas.android.com/apk/res-auto"
xmlns:tools="http://schemas.android.com/tools"
android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">
    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Hello Disha"
        app:layout_constraintBottom_toBottomOf="parent"
        app:layout_constraintEnd_toEndOf="parent"
        app:layout_constraintStart_toStartOf="parent"
        app:layout_constraintTop_toTopOf="parent" />
</androidx.constraintlayout.widget.ConstraintLayout>
```

**MainActivity.java :**

```
package com.example.applicationpractical1;
import androidx.appcompat.app.AppCompatActivity;
import android.os.Bundle;
import android.util.Log;
public class MainActivity extends AppCompatActivity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        Log.d("lifecycle", "onCreate invoked");
    }

    @Override
    protected void onStart(){
        super.onStart();
        Log.d("Lifecycle", "onStart invoked"); }
}
```

```
@Override
protected void onResume(){
    super.onResume();
    Log.d("Lifecycle","onResume invoked"); }

@Override
protected void onPause(){
    super.onPause();
    Log.d("Lifecycle","onPause invoked"); }

@Override
protected void onStop(){
    super.onStop();
    Log.d("Lifecycle","onStop invoked"); }

@Override
protected void onRestart(){
    super.onRestart();
    Log.d("Lifecycle","onRestart invoked"); }

@Override
protected void onDestroy(){
    super.onDestroy();
    Log.d("Lifecycle","onDestroy invoked"); }
}
```

    = (TextView) findViewById(R.id.editText_mobile);
    email.setText(" ");
    password.setText(" ");
    mobile.setText(" ");
}
}
```

## OUTPUT:

The screenshot displays a mobile application interface with a light pink background. At the top, the status bar shows the time as 8:51 and various icons. The form consists of three input fields: 'Email Id' with the text 'Disha Mane', 'Password' with 'dis@1234', and 'Mobile' with '123456789'. Below these fields is a checkbox labeled 'Remember Me' which is checked. At the bottom, there are three buttons: 'Sign In', 'Get Data', and 'Clear', all in a dark purple color with white text.

}
```

## OUTPUT:

The image displays two side-by-side screenshots of an Android application interface. The interface has a light blue header area with four input fields: 'Name', 'Surname', 'Marks.', and 'Id'. Below these fields is a red footer area containing four purple buttons: 'Add', 'View', 'Update', and 'Delete'. In the right screenshot, the 'Name' field is filled with 'Disha', 'Surname' with 'Mane', 'Marks.' with '9.40', and 'Id' with '1'. A white box titled 'Data' is overlaid on the red footer area, displaying the following text: 'Id:1', 'Name:Disha', 'Surname:Mane', and 'Marks:9.4'.

    </application>
    <uses-permission android:name="android.permission.INTERNET"/>

</manifest>
```

## OUTPUT:

To format and validate your JSON, just copy + paste it below:

```
1 {  
2   "cars": [  
3     {  
4       "color": "red",  
5       "brand": "Toyota"  
6     },  
7     {  
8       "color": "orange",  
9       "brand": "Ford"  
10    },  
11    {  
12      "color": "black",  
13      "brand": "Mahindra"  
14    }  
15  ]  
16 }
```

Validate JSON

Clear

Compress

JSON is valid!

# PRACTICAL N0.21

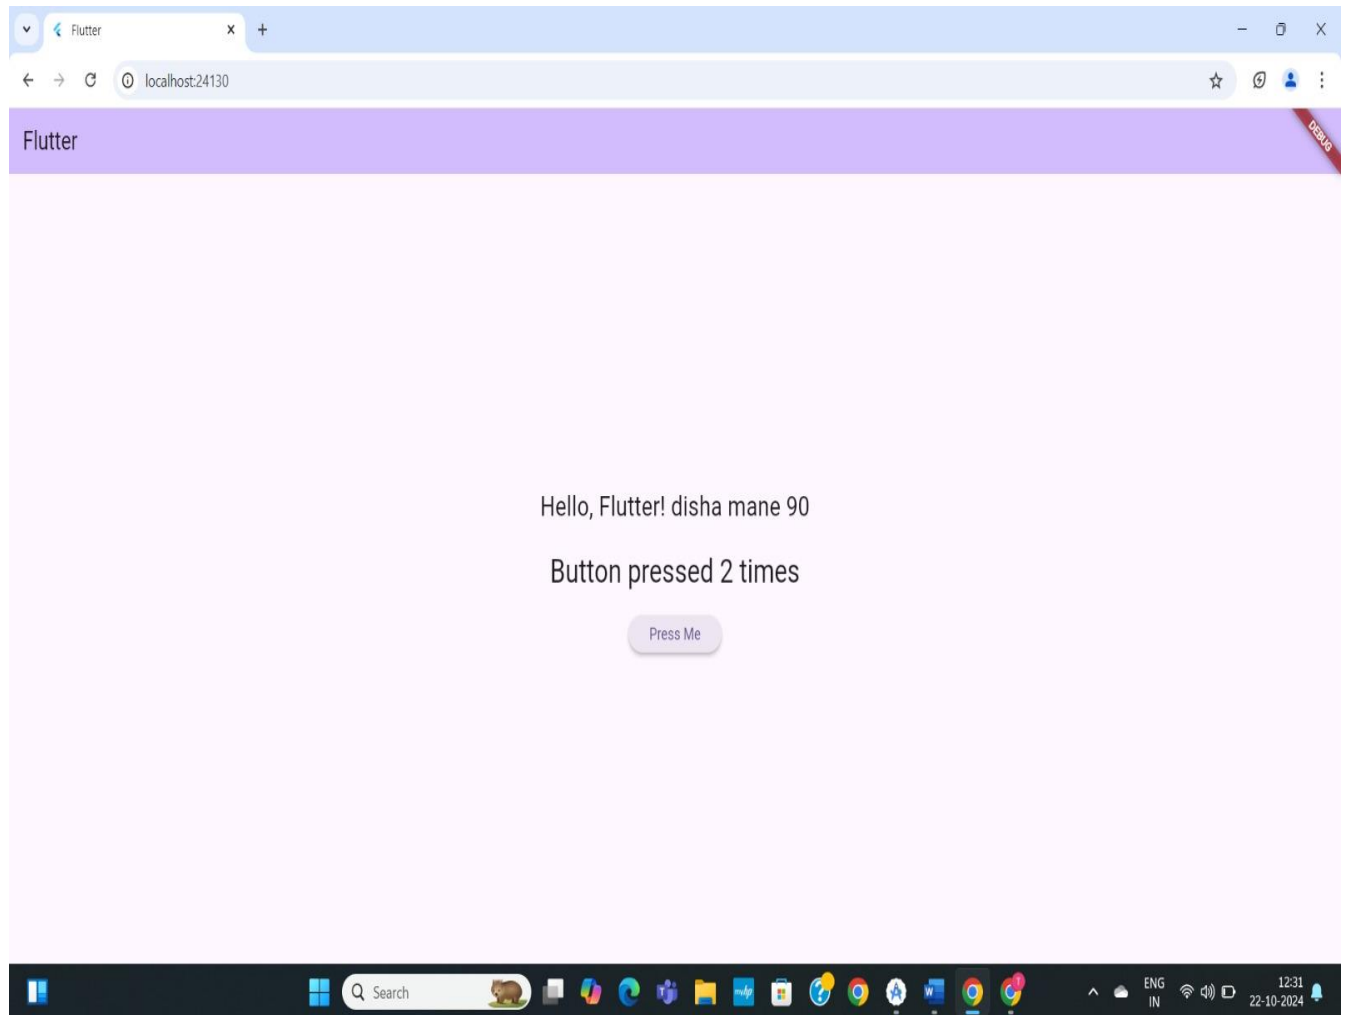

**AIM:** Create a Flutter Application to display the message.

**CODE:**

```
import 'package:flutter/material.dart';

void main() {
  runApp(const MyApp());
}
class MyApp extends StatelessWidget {
  const MyApp({super.key});
  @override Widget build(BuildContext context) {
    return MaterialApp(
      title: 'Flutter Demo',
      theme: ThemeData(
        colorScheme: ColorScheme.fromSeed(seedColor:
Colors.deepPurple),
        useMaterial3: true,
      ),
      home: const MyHomePage(title: 'Flutter
Demo Home Page'),
    );
  }
}
class MyHomePage extends StatelessWidget {
  const MyHomePage({super.key, required this.title});
  final String title;
  @override
